Past performance is not a guide to future returns.

Source: Martin Currie. The NAV basis used is cum-income in £. Please note prior to July 2017 the NAV basis used was ex-income NAV in £. Ex-income NAVs exclude current-year income, while cum-income NAVs include current-year income. These figures do not include the cost of buying and selling shares in an investment trust. If these were included, performance figures would be reduced.

Prior to 1 February 2020 the Trust's benchmark was the FTSE World index and the MSCI All Country World Index (ACWI) thereafter.

MANAGER COMMENTARY

In March, Nvidia, the computer systems designer was among the top performers. In the lead up to and following the company's Analyst Day. Management provided an update on the firm's standalone software business that represents over half Nvidia's long-term opportunity, this is a nascent business with the potential to grow from the low hundreds of millions today into multi-billion opportunity in the future. In addition, the company discussed a US\$11 billion design win pipeline across the auto industry. Linde, the industrial gases firm also positive in March, announcing a US\$10 billion share repurchase programme and raising the dividend by approximately 10%. The shares reacted positively to this news of an increased return of cash to shareholders by utilising the company's balance sheet strength, whilst retaining the capacity to invest in new growth areas. Australian blood plasma firm CSL also performed well during the month.

Online luxury platform Farfetch was the largest detractor during the month. The share price has been impacted by the current macro and geopolitical backdrop that has created uncertainty around consumer confidence and discretionary income. Despite this Farfetch, delivered strong results during the month. Management also provided a positive outlook on the company's business pipeline, media opportunities and announced a deal with Reebok for the brand platform. Kering, the French luxury goods company was also weak in March, again this was due to the negative backdrop on consumer sentiment. However, the

company had recently posted strong results in February, with improved momentum for the firm's Gucci brand. Tencent, the Chinese internet giant was also negative after the company announced results in March that were below market expectations.

We sold our small position in Chinese online retailer JD.com during the month. The Trust previously received these shares in January, the result of a one-off dividend from Tencent.

IMPORTANT INFORMATION

This information is issued and approved by Martin Currie Investment Management Limited. It does not constitute investment advice. Market and currency movements may cause the capital value of shares, and the income from them, to fall as well as rise and you may get back less than you invested. Please note that, as the shares in investment trusts are traded on a stockmarket, the share price will fluctuate in accordance with supply and demand and may not reflect the value of underlying net asset value of the shares.

Depending on market conditions and market sentiment, the spread between purchase and sale price can be wide. As with all stock exchange investments the value of investment trust share purchases will immediately fall by the difference between the buying and selling prices, the bid-offer spread. The value of investments and the income from them may go down as well as up and is not guaranteed. An investor may not get back the amount originally invested.

Investment trusts may borrow money in order to make further investments. This is known as 'gearing' and can enhance shareholder returns in rising markets but, conversely, can reduce them in falling markets.

The majority of charges will be deducted from the capital of the Company. This will constrain capital growth of the Company in order to maintain the income streams.

Morningstar Rating for Funds

Morningstar rates funds from one to five stars based on how well they've performed (after adjusting for risk) in comparison to similar funds. Within each Morningstar Category, the top 10% of funds receive five stars, the next 22.5% four stars, the middle 35% three stars, the next 22.5% two stars, and the bottom 10% receive one star. Funds are rated for up to three time periods—three-, five-, and 10 years—and these ratings are combined to produce an overall rating. Funds with less than three years of history are not rated. Ratings are objective, based entirely on a mathematical evaluation of past performance. They're a useful tool for identifying funds worthy of further research, but shouldn't be considered buy or sell recommendations.
