Past performance is not a guide to future returns.

Source: Martin Currie and Morningstar. Bid to bid basis with net income reinvested over the periods shown in sterling terms. These figures do not include the costs of buying and selling shares in an investment trust. If these were included, performance figures would be reduced.

Prior to 30 June 2011 the Company's benchmark was the FTSE All-Share index and the FTSE World index thereafter.

MANAGER'S COMMENTARY

Global equity markets dipped mid-month on fears that President Donald Trump was heading for impeachment. Concerns have arisen that he may have obstructed justice in halting the investigation into Russian influence in the US election process. The US market's decline was short lived, but it is clear that it is no longer outperforming. Political concerns and their impact on the growth outlook have caused the 10-year Treasury yield to fall from 2.41% mid-month to 2.20%.

That move in yield, and comments from the European Central Bank that the European economy still needs help from supportive monetary policy, resulted in strength in utility stocks and defensive growth sectors like consumer staples. In contrast, the financial, energy and basic materials sectors did less well.

However, over the month as a whole, the FTSE World index and the Trust's NAV rose more than 2% in sterling terms, to be up over 5% so far in 2017. While interest rates remain low, they seem to underwrite asset prices and lend them a resilience in the face of political uncertainty and growth wobbles. With all the uncertainty, it seems that investors' mood is characterised as anxious rather than euphoric; that may mean markets simply continue to 'climb the wall of worry'.

Tom Walker

[†]Source: Martin Currie and SunGard APT. Active share is a measure of the percentage difference between the portfolio holdings and the index constituents. We generally consider >70% as a high active share.

[‡]Source for historic yield: Martin Currie as at 31 May 2017. The historic yield reflects dividends declared for the previous financial year as a percentage of the mid-market share price, as at the date shown. Investors may be subject to tax on their dividends.

The NAV stated in our reporting is inclusive of current year revenue. All sources (unless indicated): Martin Currie as at 31 May 2017.

[#]Includes special dividend of 1.61p.

MANAGER'S BIOGRAPHY

Tom manages the Martin Currie Global Portfolio Trust and a number of segregated charity accounts and is head of the Global Long-Term Unconstrained team. Tom joined Martin Currie in 1996 to lead the Martin Currie Pacific Basin team, moving to head the North America team in 1998. Tom came to Martin Currie after working in Hong Kong with Baring Asset Management, where he managed the Greater China Fund Inc. and Baring's Hong Kong Fund. Before that, Tom spent six years with Edinburgh Fund Managers. Initially covering the UK and other European markets, he went on to specialise in Asia (ex Japan) and became head of that team in 1991.

WEBSITE

The Company has its own website at www.martincurrieglobal.com. There you will find information on Martin Currie, daily share prices (and associated risks), and you can access regular videos by the manager.

IMPORTANT INFORMATION

This information is issued and approved by Martin Currie Investment Management Limited. It does not constitute investment advice. Market and currency movements may cause the capital value of shares, and the income from them, to fall as well as rise and you may get back less than you invested. Please note that, as the shares in investment trusts are traded on a stockmarket, the share price will fluctuate in accordance with supply and demand and may not reflect the value of underlying net asset value of the shares.

Depending on market conditions and market sentiment, the spread between purchase and sale price can be wide. As with all stock exchange investments the value of investment trust share purchases will immediately fall by the difference between the buying and selling prices, the bid-offer spread. The value of investments and the income from them may go down as well as up and is not guaranteed. An investor may not get back the amount originally invested.

The majority of charges will be deducted from the capital of the Company. This will constrain capital growth of the Company in order to maintain the income streams.
